

IBIZA & FORMENTERA MARINE PLASMA

Ibiza & Formentera Marine Plasma is a family business linked to the Sea, to health and to environmental values. We collect the seawater from areas with high plankton levels giving the seawater high ionic bio-availability, called Marine Plasma. It is then **cold filtered** and bottled to maintain minerals and trace elements.

Why Marine Plasma?

Seawater - Marine Plasma and our bodies cells have a similar chemical ionic composition, including elements that are essential for its normal functioning. This similarity allows the Marine Plasma to function like a natural, bio-available macronutrient. Its alkaline **PH of 8.2** favours the body's acid-base balance.

Marine Plasma:

Recharge of hydro-electrolytes thanks to its mineral salts.

Regulates the enzyme function and helps to improve the metabolic and immunological function.

Regenerates the cells by bringing back its homeostatic balance and provides the necessary materials for its own reparation.

The prestige and recognition of our products is due to the quality of our primary source.

Excellent hyper oxygenated seawater by biggest Posidonia's meadow in the world, declared World Heritage Site by UNESCO in 1999, and by the marine currents that contribute to the purity and clarity, which has made famous the Ibiza and Formentera's Sea.

Composition:

(among others minerals)

Chlorides (Cl) 21555 mg/l

Sodium (Na) 12144 mg/l

Magnesium (Mg) 1801 mg/l

Calcium (Ca) 410 mg/l

Potassium (K) 392 mg/l

Phosphorus (P) 0,088 mg/l

Zinc (Zn) 0,005 mg/l

Iron (Fe) 0,0034 mg/l

Manganese (Mn) 0,0005 mg/l

Silicon (Si) 2,9 mg/l

Ibiza & Formentera Marine Plasma does not at any stage make use of any chemical substance or material that may alter the original composition of the seawater.
