

Beef Herd, Platte Colony

Dale Stahl - director of Operations at the Hutterite Colony; 1/6/2017

We added 2 more water tanks to the pen where we keep the weaning calves. To the 2 new tanks we installed 2 of your new Crystal Blue Water Structuring units. It turns out that the calves would only drink the Crystal Blue Water and would not touch the unstructured water that just sat there in the other tanks. Prior to installing your units, we were having a problem with some of the calves getting sick and requiring medications. But since they have been on the Crystal Blue Structured Water, none of the calves have been sick at all. The calves are now gaining weight faster with virtually no signs of stress.
